HELPEFUL-

ROBOT

CONTENTS

Introduction Pg.1

Looks and functions Pg.2-3

My opinion on robots Pg.4

Why robots can't replace teachers Pg.5

Conclusion Pg.7

Introduction

My robot's name is 'Salt'. *Also known as Pepper 2.0 version * It can help students and teachers by carrying heavy items that they need to transport around the school.

Looks and functions

Salt has big elephant-like ears 🦏 🐘 that can hear very clearly, a transparent head just like the clear flawless waves 🌊, its torso looks like a long trapezium-shaped roof, and it has a monitor which looks like Siri attached to its chest to sense where lost items are. If you ever lose anything you can ask Salt to help you find them, and within seconds your lost item will have been found like it magically appeared.

Looks and functions

It also has buff arms and hands for carrying heavy things *Salt is a robot who is buff and strong 💪*. It uses rollers to move around the school smoothly and swiftly on the floor which also makes the robot's speed increase. Since the robot's name is Salt and the opposite form is pepper plus it also mostly got the inspiration from the robot Pepper and because of how it looks, it is sometimes known as Pepper's sibling.

My opinion on robots

Teachers could be gone forever and may also become redundant. Robots also don't understand the meaning of 'feelings', 'empathy' and 'emotions' because they are just a dull, soulless and emotionless machines made by humans. They don't have the creative mindset that teachers have. It won't and can't replace teachers because they don't have all the talent and understanding that teachers do. Especially because they don't understand **FEELINGS!!!**

Why robots can't replace teachers

In my opinion, I don't think robots will be able to replace teachers in the near future because they can run out of battery all of a sudden. It will be difficult to move it back to its charging place unless it is nearby. Also the electrical bill will increase since robots use up a lot of electricity which will waste a lot of money.

Conclusion

In conclusion, I hope robots won't replace teachers in the future. If they do, schools will be in a bad condition.

SUMMARY

This book is about my helpful robot called 'Salt' helping people in school and my opinions on robots replacing teachers in the near future.
